aXYs is a XY MIDI controller for VST plugins.

You can assign X and Y axis to multiples parameters with differents ranges.

There is 2 methods to use it.

METHOD 1: CC# direct assign

This method is perfect if your VST plugin allready have CC assigned, or if you can define them.

- Set the CC# in aXYs.
- Set the value range in the matrix (negative or positive).

METHOD 2: MIDI Learn

Some plugins have a « Learn » button.

- In aXYs, define the CC# you want to use.
- In your destination plugin, active the learn fonction and choose the parameter.
- In aXYs, press X or Y learn button.
